Shower Room Design Guide
Durable. Reliable. Diverse.

Are you in pursuit of the commercial shower solution designed to provide a solid foundation for your functional and aesthetic values – and withstand the test of time?

So are the experts at Bradley.

In fact, this approach to enduring, classic design has been our passion – and secret to success – for over 85 years.

Bradley offers the most comprehensive line of shower valves and shower systems, in addition to lavatories, faucets, partitions, thermostatic valves, solid plastic lockers, washroom accessories, and emergency fixtures. The goal is to provide you and the people who rely on your services with the widest array of design solutions available anywhere.

*This Shower Room Guide has been designed to help you see how you can get the most from your relationship with Bradley.*

BRADLEY: THE SOLUTION FOR SHOWER APPLICATIONS

1 PERSON BUILT-IN
- Familiar to users and maintenance staff
- Each shower built on site (in wall)
- Requires independent supply connections
- Layout flexibility

1 PERSON PREFAB
- Eliminates in-wall piping
- Preassembled – no need to “build” on site
- Requires independent supply connections
- Accommodates exposed or concealed piping
- Best in tight spaces

2-3 PERSON PREFAB
- One set of supply connections
- Preassembled – no need to “build” on site
- Soap dispensing can be incorporated
- Accommodates exposed or concealed piping
**COLUMN PREFAB**
- One set of supplies for up to six stations
- Preassembled complete with drain system
- Water wear on walls eliminated
- Ideal for remodel
- Small surface to clean

**WALL PANEL PREFAB**
- Preassemble
- Easy access to supply piping
- One set of connections per panel
- Layout flexibility
- Ideal for remodel

*Shower is applicable to facility type*
The pathway from kindergarten through high school is probably one of the ultimate test tracks in any product’s life cycle. Only proven, solid solutions that can withstand the rigors of children and young adults will make the grade. Bradley shower products score high on this test.

**Key points:**

**Elementary Schools**
- Shower rooms should have their showers installed at 5’6”
- Showers without partitions allow for easier supervision

**High Schools**
- Shower rooms should have their showers installed at 6’0”
- In situations where an entire class must shower in a limited time, maximum space utilization must be achieved
- Provide adequate number of showers for time limitations (3 minutes)
- Utilize a layout design that allows maximum supervision

**Air Metering Valve**
Reliably meters water from preset intervals of 5 to 45 seconds. ADA compliant.

**Column Shower**
Maximize shower space while virtually eliminating water wear on walls. One set of supply lines complete with its own drain.
School facilities must now balance creating resilient and safe environments that are also welcoming. Furthermore, proper restroom and locker room planning must account for a multitude of issues from security and vandalism to traffic flow, ADA compliance and ease of maintenance.

**TouchTime® Metering Valve**  
The most reliable metering valve in the industry - is easy to install, just plug it in and go. Performance is guaranteed since there are few moving parts and its operation is unaffected by most chemicals and minerals often present in municipal water supplies. The solid state digital circuitry is completely sealed within the push button cylinder, so water and humidity won’t affect performance. Available pre-set in 60- or 180-second cycles. ADA compliant.

**EconoWall Shower**  
Great solution for limited space and ease of use. Comes completely preassembled for quick installation.

Student Housing

The transition from home into one’s first experience with independence is a major moment in any person’s life. And as schools look for new ways to compete for the best talent, not surprisingly, housing presentation is playing a greater role in defining a parent’s comfort level, and a student’s ultimate decision. That is why today’s student housing market calls for both durable yet increasingly upscale bath and shower solutions.

**Key points:**

- Student housing and shower rooms are increasingly private accommodations
- Showers provide a space and moment for relaxation in an otherwise hurried day: focus on systems and designs that appeal to feelings of “home”
- In public spaces, focus on designs that encourage social interaction, while offering a sense of privacy with respect to personal space

**Pivoting Wall Shower**

With an industry-unique hinge for easy access and quick installation.

---

**Terreon® Shower Pan**

Solid surface, textured floor with ribbed bottom for extra strength. Available in white, bone, taupe and gray.

---

**Equa-Flo™ HD**

Pressure-balancing valve for heavy usage applications, with soft flow showerhead.
### MAINTENANCE
Reduce valve-servicing expense by specifying simplified, single-handle, pressure-balancing or thermostatic valves.

### PRIVACY
Consult on specific student housing privacy requirements, which may vary by institution.

Gender preferences indicate that private showering and changing units are essential for women, and of increasing interest to men.

Privacy can be selectively designed into public spaces by the use of Bradley’s partitions; available in a variety of materials and finishes.

### VANDALISM
Vandalism may be minimized or eliminated in more public spaces in the following ways:
- Balance visual goals with durable pressure-balancing, or thermostatic valve with metal stem and control handle
- Durable chrome-plated brass showerheads also extend useful life

### CONSERVATION
We suggest avoiding metering valves and other options that restrict water flow and temperature controls, to respect personal requirements and preferences.

Select water-conserving shower-heads with 2.5 or lower GPM flow controls.

---

**Shower Room Accessories**
Shower curtains, grab bars, soap dispensers, towel/robe hooks and more.

---

**Consultation on Specific Student Housing Privacy Requirements**

Gender preferences indicate that private showering and changing units are essential for women, and of increasing interest to men. Privacy can be selectively designed into public spaces by the use of Bradley’s partitions; available in a variety of materials and finishes.

---

**Satin Finish Stainless Steel Design**
Satin finish stainless steel design to match any decor in recessed, semi-recessed and surface-mounted styles.

---

**Shower Room Accessories**

- Shower curtains
- Grab bars
- Soap dispensers
- Towel/robe hooks

---

**Maintenance, Privacy, Vandalism, Conservation**

- Reduce valve-servicing expense
- Consult on specific student housing privacy requirements
- Vandalism may be minimized or eliminated
- We suggest avoiding metering valves
- Select water-conserving shower-heads

---

**Variability and Design Options**

Consider Bradley’s durable Terreon® shower pans for both long-lasting and aesthetic design options.

Gender preferences indicate that private showering and changing units are essential for women, and of increasing interest to men.

Privacy can be selectively designed into public spaces by the use of Bradley’s partitions; available in a variety of materials and finishes.

---

**Conservation**

Select water-conserving shower-heads with 2.5 or lower GPM flow controls.

---

**Maintenance**
Reduce valve-servicing expense by specifying simplified, single-handle, pressure-balancing or thermostatic valves.

---

**Design Considerations**

- Balancing visual goals with durable pressure-balancing or thermostatic valve
- Durable chrome-plated brass showerheads

---

**Conclusion**

You need accessory options and we have them to fit every washroom and every budget. Satin finish stainless steel design to match any decor in recessed, semi-recessed and surface-mounted styles.

---

**Vandalism Minimization**
Vandalism may be minimized or eliminated in more public spaces in the following ways:
- Balance visual goals with durable pressure-balancing or thermostatic valve
- Durable chrome-plated brass showerheads

---

**Additional Considerations**

- Avoid metering valves
- Select water-conserving shower-heads

---

**Shower Room Amenities**

- Shower curtains
- Grab bars
- Soap dispensers
- Towel/robe hooks

---

**Variation and Flexibility**

Bradley’s Terreon® shower pans offer durability and aesthetic options.

Gender preferences emphasize the importance of private showering and changing units.

Privacy can be strategically designed into public spaces using Bradley’s partitions.

---

**Sustainable Practices**

Select water-conserving shower-heads to conserve resources.

---

**Further Recommendations**

- Avoid metering valves to respect personal requirements.
- Choose water-conserving shower-heads.

---

**Conclusion**

You need accessory options and we have them to fit every washroom and every budget. Satin finish stainless steel design to match any decor in recessed, semi-recessed and surface-mounted styles.

---

**Privacy Consultation**

Consult on specific student housing privacy requirements.

- Gender preferences indicate private showering and changing units.
- Privacy can be selectively designed.

---

**Vandalism Minimization Strategies**

- Balance visual goals with pressure-balancing or thermostatic valve.

---

**Environmental Stewardship**

Select water-conserving shower-heads for sustainable practices.

---

**Additional Recommendations**

- Minimize or eliminate vandalization.
- Select durable shower heads.

---

**Flexibility and Adaptability**

Consider Bradley’s Terreon® shower pans and partitions for long-lasting and aesthetic design.

---

**Conclusion**

You need accessory options and we have them to fit every washroom and every budget. Satin finish stainless steel design to match any decor in recessed, semi-recessed and surface-mounted styles.
Fitness Clubs

At the heart of things, fitness clubs are about maintaining a sense of connectedness and balance in one’s life. And so the club’s physical environment ultimately needs to mirror the membership experience. Competition, personal challenge and achievement, are the things that get reinforced every time a member “hits the showers” at the end of a workout session. It’s also what keeps them coming back. Bradley solutions help reinforce the right impression every time.

**Key points:**
- Members, especially in private clubs, typically prefer more personalized spaces that balance privacy with social ease
- Demographic needs should be considered, especially in more traditional settings, or in areas catering to retiree members

**Lenox® Lockers**
Design flexibility, 20-year warranty, and shipped fully assembled for easy installation.
- Better alternative to metal because they are unaffected by moisture, humidity, or chlorine.
- Completely corrosion-proof
- Can be easily with soap and water.
- Absorption rate of nearly zero

**Barrier-Free Hand-Held Shower**
Includes thermostatic mixing valve to maintain consistent water temperature. Showerhead is connected to a 60” stainless steel flexible hose. A lever handle diverter controls the flow of water between the hand shower and the showerhead.

**Equa-Flo C5**
Pressure-balancing valve with deluxe showerhead.

</tbody>
</table>

“We were confident that the Lenox Lockers would perform well in securing items, they look good and they’re easy to clean. The only challenge our maintenance staff has is water inside the lockers when they’re cleaned with a pressure washer…we can handle that.”

Recreational manager
Muehlenbeck Center

Bradley’s WS-1X individual shower and WS-1X-HN individual showers provide options at the fitness club.

The club also features Bradley’s Express® Lavatory MG Series, Lenox® solid plastic lockers and pedestal benches, Mills® stainless steel partitions, and washroom accessories.
Sport & Rec Facilities

There are few places on earth that see as much rugged foot traffic and rigorous use as a sports and recreation facility. Especially when it comes to shower room fixtures. Designed to handle the roughest traffic flows in the business, count on Bradley’s enduring quality and flexibility to handle any team’s (or fan’s) peak-performance needs.

Key points:
Public and Private Sports & Recreational Facilities
• Multi-generational usage means showerheads should be installed at varying heights
• It is essential to comply with all public-use rules, including Americans with Disabilities Act (ADA)
• Water conservation is of high interest to owners looking to contain costs
• Specify vandal-resistant fixtures

Stadium & Arena Shower Rooms
• Specify quick clean up, vandal-resistant fixtures
• Showerheads to accommodate athlete heights
• Avoid metering valves that restrict duration of water flow

University & College Athletic Facilities
• Provide independent temperature control
• Design with aesthetics in mind – as these facilities are often showcased for athletic recruiting

Coverall Wall Shower
Preassembled, for easy installation, heavy-duty construction. Ideal for Park and Rec usage.

Equa-Flo HD
Pressure-balancing valve keeps water temperature and pressure at a consistent level. Shown with soft flow showerhead.

“It’s been a year and a half since we started the shower renovation with Bradley...There are no drips and the shower rooms are dry. We have had no maintenance on any of the showers, which has saved us huge dollars in labor and parts, as well as the water savings.”

Maintenance manager
Edmonton Mall
Industrial Plants

Supporting the manufacturing goals of throughput and uptime was the original inspiration behind Bradley’s first industrial group shower and washroom systems. The designs spearheaded an industrial revolution of their own by helping employees feel and ultimately deliver their best. Now, more than 85 years later, Bradley is still refining solutions to help meet employee needs for both comfort and safety, keeping the wheels of industry turning.

Key points:
• Industrial settings typically prefer privacy showers in both women and men’s locker rooms
• These settings also must appeal to individual needs and preferences, including selective temperature controls, while avoiding use of metering valves and extremely low-flow conservation showerheads
• Specify heavy-duty fixtures
• Accommodate peak demand with an ample supply of showerheads

Thermostatic Mixing Valve
Reliable wax-filled thermostat with adjustable set point. Positive shutoff of hot supply.

Panelon®
Prefabricated modular showers can be built to your specifications
### Maintenance
Panelon® showers and prefabricated modular shower systems are recommended, especially for open shower room applications.

Consider Bradley’s hinge design. Pivoting Individual Wall Shower for streamlined, trouble-free servicing, without dismantling.

### Privacy
Check with management’s preferred privacy requirements

Adult men and women prefer use of private shower stalls

### Vandalism
Vandalism is not a common concern. However, if present, it can be minimized or eliminated in the following ways:

Balance aesthetic goals with durable, pressure-balancing, or thermostatic valve with metal stem and control handle

Durable, chrome-plated brass showerheads also extend useful life

### Conservation
To respect personal requirements and preferences, avoid metering valves and other options that restrict personally-desired water flow

Specify simple, single-handle pressure-balancing valves or thermostatic valves to reduce valve-servicing costs

---

**Privacy Multi-Stall**
Unit complete with curtain and necessary hardware for installation. Panels available in Solid Plastic or Stainless Steel.

Showerhead Configurations for Models 2C–5C

![Privacy Multi-Stall Image](image-url)
The Americans with Disabilities Act (ADA) is a comprehensive civil rights law enacted in 1990 to establish various rights to people with disabilities. Following are some considerations for providing barrier-free shower room access that meets ADA. More information/guidelines can be obtained at www.ada.gov.

Designing the Room Layout
- Obtain specific rules from ADA regarding mounting heights, clearances and ease of operation
- Recheck all measurements for entire space – as it is considered in the guidelines
- Consult local codes for any special requirements

ADA Shower System Requirements
- 36” x 36” shower stall
- Seat mounted 17-19” from floor
- Seat is full depth of stall wall
- Grab bar installed on the control side and back side of stall 33” to 36” from floor
- Spray unit must offer both hand-held unit with 60” hose and fixed showerhead
- Controls are 38-48” from floor
- Shower controls must require less than 5 lb of pressure to operate without any grasping
- Suggest Bradley’s Equa-Flo pressure-balancing valve or TouchTime® metering valve with tempered water supply
Layout Considerations

Maximum Space Efficiency
Can be achieved by utilizing the center of the shower room. Back-to-back panel showers, conventional showers or the use of column showers provide multi-station showering.

Minimum Practical Clearances
For additional Shower room layout information, refer to Bradley’s Technical Data found on the web: bradleycorp.com.

The clearances shown are absolute minimums. Always allow a minimum of 24" for traffic to/from a station.
