Cleaning Stainless Steel	4

IMPORTANT

Read this entire installation manual to ensure proper installation, then file these instructions with the owner or maintenance department.

Separate all parts from packaging and make sure all parts are accounted for before discarding any packaging material. If any parts are missing, do not attempt to install your LAV6185FM unit until you obtain the missing parts.

Before installing components, all connection supply lines must be flushed and free of foreign material such as pipe dope, pipe chips, solder, etc. Bradley will not be responsible for leaking valves due to the presence of foreign material, or distorted stop gaskets where excessive pressure (above 30 lbs. of torque) has been applied to the stop cap. Make sure that all water supply lines are completely turned off before beginning installation.

Product warranties may be found under “Product Information” on our web site at www.bradleycorp.com.

Compliance and conformity to local codes and ordinances is the responsibility of the installer.

Installation Instructions

Step 1: Rough-In

1. Rough in the wall openings as shown in Figure 1.
2. Install four 1/4" anchors at the locations shown in Figure 1 (anchors are supplied by installer and suitable for mounting the lavatory to the wall).
3. **OPTIONAL ANGLE BRACKETS:** Install four 1/4" anchors at the locations shown in Figure 1 (anchors are supplied by installer and suitable for mounting the angle brackets to the wall).

Installation Instructions *continued* . . .

Step 2: Mount lavatory to wall

IMPORTANT: All fasteners must be securely tightened to approximately 60 ft./lbs. All mounting hardware provided by Bradley is essential for properly anchoring units. Bradley cannot assume responsibility for units improperly installed.

1. **OPTIONAL ANGLE BRACKETS:** Mount the angle brackets to the wall at the anchors installed in Step 1 (anchors and mounting hardware supplied by installer) (ref. Figure 2).
2. With the assistance of another person, lift the lavatory up and position it over the wall anchors installed in Step 1.
3. Secure the lavatory to the wall with the appropriate hardware (supplied by installer).
4. **OPTIONAL ANGLE BRACKETS:** Secure the angle brackets the bottom side of the lavatory with the hardware supplied (see Figure 2).

Step 3: Connect supply, drain and waste

IMPORTANT: Flush all supply lines thoroughly before making connections.

1. Make the lavatory drain connections to the elbow (piping supplied by installer).
2. Install the filler according to the installation instructions provided by the filler manufacturer.
3. Turn on the water to the lavatory and check for leaks.
4. Activate the faucet to purge air from the lines.

Step 4: Attach optional bottom cover assembly

1. **OPTIONAL BOTTOM COVER ASSEMBLY:** Secure the bottom cover assembly to the bottom side of the lavatory through the holes in the unit with the #10-24 security screws provided.

Cleaning and Maintenance Instructions for Stainless Steel

Material Description: Stainless steel is extremely durable, and maintenance is simple and inexpensive. Proper care, particularly under corrosive conditions, is essential. Always start with the simplest solution and work your way toward the more complicated.

Routine cleaning: Daily or as often as needed use a solution of warm water and soap, detergent, or ammonia. Apply the cleaning solution per the manufactures instructions and always use a soft cloth or sponge to avoid damaging the finish.

Stubborn Stains: To remove stains from stainless steel use a stainless steel cleaner and polish such as Ball® stainless steel cleaner or a soft abrasive. Always follow the manufactures instructions and apply in the same direction as the polish lines.

 **IMPORTANT: NEVER USE ORDINARY STEEL WOOL OR STEEL BRUSHES ON STAINLESS STEEL. ALWAYS USE STAINLESS STEEL WOOL OR STAINLESS STEEL BRUSHES.**

Special Situations for Material

Fingerprints and Smears: To remove fingerprints or smears use a high quality stainless steel cleaner and polish in accordance with the manufactures instructions. Many of these products leave a protective coating the helps prevent future smears and fingerprints.

Grease and Oil : To remove grease and oil use a quality commercial detergent or caustic cleaner. Apply in accordance to the manufactures instructions and in the direction of the polish lines.

Precautions: Avoid prolonged contact with chlorides (bleaches, salts), bromides (sanitizing agents), thiocyanates (pesticides, photography chemicals, and some foods), and iodides on stainless steel equipment, especially if acid conditions exist.

 **IMPORTANT: DO NOT PERMIT SALTY SOLUTIONS TO EVAPORATE AND DRY ON STAINLESS STEEL.**

The appearance of rust streaks on stainless steel leads to the belief that the stainless steel is rusting. Look for the actual source of the rust in some iron or steel particles which may be touching, but not actually a part of the stainless steel structure.

NOTE: Strongly acidic or caustic cleaners may attack the steel causing a reddish film to appear. The use of these cleaners should be avoided.

Brand Names: Use of brand names is intended only to indicate a type of cleaner. This does not constitute an endorsement, nor does the omission of any brand name cleaner imply its inadequacy. Many products named are regional in distribution, and can be found in local supermarkets, department and hardware stores, or through your cleaning service. It is emphasized that all products should be used in strict accordance with package instructions.
